NAVY COOPERATIVE RESEARCH AND DEVELOPMENT AGREEMENT  
BETWEEN  
COMNAVMETOCCOM  
AND  
HARRIS CORPORTATION

PREAMBLE

Under authority of the U.S. Federal Technology Transfer Act of 1986 (Public Law 99-502, 20 October 1986, as amended), Commander, Naval Meteorology and Oceanography Command, [known as COMNAVMETOCCOM], located at 1100 Balch Blvd., Stennis Space Center, MS, and Harris Corporation, (HARRIS) whose corporate headquarters are located at 1025 West NASA Boulevard, Melbourne, FL enter into this Cooperative Research and Development Agreement (CRADA), which shall be binding upon both Collaborators and their assignees according to the clauses and conditions hereof and for the term and duration set forth.

The U.S. Federal Technology Transfer Act of 1986, as amended, provides for making the expertise, capabilities, and technologies of U.S. Federal laboratories accessible to other Federal agencies; units of State or local government; industrial organizations (including corporations, partnerships and limited partnerships, and industrial development organizations); public and private foundations; nonprofit organizations (including universities); or other persons in order to improve the economic, environmental, and social well-being of the United States by stimulating utilization of U.S. Federally funded technology developments and/or capabilities.

COMNAVMETOCCOM, through its subordinate activity, Naval Oceanographic Office (NAVOCEANO), has developed an extensive range of Meteorology and Oceanography (METOC) data holdings and related retrieval processes which are utilized to prepare products for the U.S. Navy. These data holdings and retrieval processes are also being utilized in the implementation of a METOC Geospatial Initiative (MGI) for developing information discovery and retrieval capabilities which will result in an United States Imagery and Geospatial Information Service (USIGS) compatibility. NAVOCEANO, as a result of continuing technical programs, such as MGI, has created leading edge technology in many METOC areas, which are critical to developing a competitive world position for many U.S. corporations. In accordance with the Federal Technology Transfer Act, NAVOCEANO desires to make this expertise and technology available for use in the public and private sector.

HARRIS has the interest, resources and technical expertise to incorporate the Navy's database and retrieval technology into products and services intended for commercial use and sale. Harris conducts advanced research studies, develops prototypes, and produces and supports state-of-the-art, highly reliable communications and information systems that solve the mission-critical communications challenges of its military and government customers, and provides the technology base for the company's diverse commercial businesses.

NOW THEREFORE, the Collaborators agree as follows.

Each Collaborator filing a Patent Application on a Subject Invention shall provide the other Collaborator with a copy of any communication relating to prosecution of said Patent Application within thirty (30) days of receipt of such communication.

##### **7.4.4.5.2 Access to Patent Application File and Right to Make Copies**

Upon written request, the filing Collaborator shall give the other Collaborator an Associate Power of Attorney, with authorization to access the Patent Application, make copies, and, in the event the filing Collaborator fails or declines to take action, do all that is necessary to secure Intellectual Property protection for the Subject Invention.

#### **7.4.4.6 Rights of Inventors if the Collaborators Decline to File a Patent Application**

In the event both Collaborators decline to file a Patent Application on a Subject Invention, the Government will renounce its entitlement and leave its rights to the inventor(s) who may retain ownership of the Invention, subject to the retention by each Collaborator of a nonexclusive, irrevocable, paid-up license to practice the Subject Invention or have the Invention practiced throughout the world by or on its behalf.

Navy Organization: NAVAL METEOROLOGY AND OCEANOGRAPHY COMMAND

APPENDIX A  
STATEMENT OF WORK  
BETWEEN  
NAVAL OCEANOGRAPHIC OFFICE  
AND  
HARRIS CORPORATION

The collaborators agree to perform the following tasks:

NAVOCEANO will be responsible for the following tasks (List as applicable):

1. NAVOCEANO will provide access to appropriate subject-matter experts to enable Harris to document current METOC data processes and user concept of operations.
2. NAVOCEANO will perform the installation of the Harris geospatial front end and exploitation tools into the NAVO Warfighting Support Center (WSC) for evaluation.
3. NAVOCEANO will conduct testing of the Harris software using Harris-provided procedures. Testing will emphasize operational data and scenarios.
4. NAVOCEANO will provide written feedback of noted deficiencies or suggested enhancements to the Harris products.
5. NAVOCEANO will identify any shortcomings in the Data Warehouse (DWH) logical data model (LDM) to support WSC holdings and reconcile any changes to the DWH, as necessary.
6. NAVOCEANO will provide sample NAVOCEANO-specific products to Harris to facilitate augmentation of Harris' existing image exploitation capabilities.
7. NAVOCEANO will provide Harris information on Specialized Analyzed Image, Littoral (SAIL) production processes to aid Harris in the application of like product to a non-hydro-centric customer community (e.g., Intelligence Community Multi-INT Acquisition Program).

Harris will be responsible for the following tasks (list as applicable):

1. Harris will conduct an assessment of NAVOCEANO data, to include data types, formats, models, as well as the requirement for additional data (i.e., geospatial products).
2. Harris, after conducting data assessments, will develop a LDM based on the NAVOCEANO DWH LDM and the USIGS Archive and the Dissemination LDM developed by Harris for National Imagery and Mapping Agency (NIMA). The following subtasks will also be performed:
  - 2.1 Identify specific, existing support in the USIGS Archive and Dissemination (A&D) LDM for current NAVOCEANO mission specific data and standards including Digital Geographic Information Exchange Standard (DIGEST) and Synthetic Environment Data Representation and Interchange Specification, SEDRIS);
  - 2.2 Define recommended extensions to the USIGS A&D LDM to provide additional query support to current NAVOCEANO mission specific data Hydrographic Source Assessment System (HYSAS) and SAGE;

- 2.3 Develop the corresponding unified USIGS/NAVOCEANO logical data model and data dictionary that supports discovery and retrieval of a representative set of NAVO Mission Specific Data;
  - 2.4 Using the Joint METOC Conceptual Data Model as a basis, develop notional data architecture and supporting LDM to facilitate storage and retrieval of 3-D, geospatial and time-varying data and management of data quality metadata (e.g., source system heritage and production methods).
  - 2.5 Provide recommendations to NAVOCEANO regarding reconciliation of the DWH with WSC data holdings. These recommendations are for consideration for incorporation into the DWH LDM by NAVOCEANO.
3. Harris will document the results of subtasks 2.1 through 2.5, and provide as a deliverable report to NAVOCEANO.
4. Harris engineers will develop a prototype geospatial query capability demonstrating the concepts of enhanced discovery and retrieval with an integrated exploitation capability. The prototype will be based on either the existing GOTS package, Information Access Services (IAS) or Web Access Retrieval Prototype (WARP); both developed by Harris for NIMA. This activity will consist of two main tasks: establish a GOTS-based, NIMA discovery and retrieval capability at NAVOCEANO and deploy the proof-of-concept capability in conjunction. The following subtasks will be performed:
- 4.1 Determine most cost-effective NIMA GOTS data and retrieval capability and work with NAVOCEANO systems personnel to establish a demonstrable capability;
  - 4.2 Based on GOTS query software, implement prototype metadata database and ingest sample set of NAVOCEANO mission-specific-data metadata;
  - 4.3 Demonstrate a GOTS-based geospatial front end to search and display sample geo-referenced data set. Evaluate and draft a migration path that would leverage the geospatial interface (GI) front end that exists for the NAVOCEANO DWH "catalog" in achieving a consolidated user interface.
  - 4.4 Integrate and demonstrate exploitation tools to manipulate and render sample data products to show potential production process improvements (e.g., geo-positioning, auto registration, topographic processing, precision targeting).
5. Harris engineers will assess the various NAVOCEANO WSC production processes for improvement opportunities. Specifically, identify process changes that would automate production steps and/or introduce existing GOTS capabilities, (e.g., MET – Multi-image Exploitation Tool), which would reduce production timelines. Potential improvements may include auto-registration, ortho-rectification and geo-referencing enhancements.

NAVOCEANO and Harris will be responsible for the following joint tasks (if applicable):

1. The results of Task 4 will be a working prototype, deployed and utilized at NAVOCEANO, that demonstrates an enhanced discovery and retrieval concept with an integrated exploitation capability and integrated access to external imagery and geospatial D&R sources.

2. Harris engineers will work in conjunction with NAVOCEANO to acquire MET from NIMA, install it and integrate it into existing production workflows within NAVOCEANO.
